

Product Specifications

PHYSICAL

Diameter:	6-5/8 inches
Depth:	5-1/2 inches
Weight:	Approximately 8 pounds
Socket style:	Ring or Ringless, 200 Amp, 4 Jaw

ELECTRICAL

Source compatibility:	200 Amperes or less
Withstand current:	10,000 Amperes RMS symmetrical at .7-.8 pf, 240 Volts, 60 Hz 6,000 Amperes for 6 cycles at .7-.8 pf, 240 Volts, 60 Hz
Generator Output:	6.8 kW continuous, 7.2 kW peak -120/240 Volt
Connection:	NEMA L14-30 Twist Lock*

OPERATIONAL

Transfer Type:	Break-Before-Make
Transfer Delay:	300,000 Operations Compliance
ANSI:	C37.90A-1974, C37.98-1987, C37.90-1989, C62.41, C12.7-1982, C12.1-1982

*Connecting to a home
generator made simple*

Improving life with energy

**NO HASSLES
NO HAZARDS
NO HEADACHES**

Finally, connecting a home generator is as easy as using a plug and flipping a switch. There are no sky-high installation bills. No complicated hook-ups. No endless waits for electricians. And no fumbling with connections for different appliances.

It's safe. It's convenient. It's easy. It's an innovative new energy solution from Black Hills Power called GenerLink.

Black Hills Power knows that today's lifestyles and livelihoods depend on electricity more than ever before. Whether for appliances, home computers, faxes or other electronic devices, more people want the assurance of being plugged in all the time – even when emergencies strike.

GenerLink gives that to you. It offers all the benefits of connecting a home generator without the hassles, headaches and hazards. It gives you the perfect solution to your emergency power needs – safely, quickly and inexpensively.

Thanks to GenerLink, you can have more than emergency power, you can have 100 percent peace of mind.

What is GenerLink?

GenerLink is an innovative and proven device from Black Hills Power that allows you to easily connect a small generator to your home during power emergencies. The device is a small collar that is inserted between your home's electric meter and meter socket. Powering your home is as easy as plugging a home generator into GenerLink.

How easy is GenerLink to install?

It couldn't be simpler. Unlike traditional installation methods that can take an electrician 2 to 3 hours to complete, GenerLink is attached by a Black Hills Power Service Technician and is ready for use in less than an hour. Your household meter plugs into GenerLink and a cord connects it to your generator. Just plug it in and you're in business.

How easy is GenerLink to use?

Prior to connecting and starting your home generator, you simply switch the breakers on your home's circuit panel to match the appliances you choose.

Traditional generator connections limit a home owner's ability to change applications. With GenerLink, using different appliances at different times is as easy as flipping a switch.

Don't miss out on this exciting opportunity for 100 percent peace of mind!

- **GenerLink allows you ultimate flexibility.**
You choose the appliances you want to operate.
- **GenerLink is safe.**
No more hazardous extension cords around the house.
- **GenerLink is hassle free.**
You don't even need to be home for the installation.
