Advice Letter No. 37

Issue Date: November 1, 2023

Decision or Authority No.

Effective Date: January 1, 2024

**GAS RATE ADJUSTMENTS  
SYSTEM SAFETY AND INTEGRITY RIDER (“SSIR”)  
(Continued)**

**SSIR ADJUSTMENT CALCULATION**

A separate SSIR rate shall be calculated for each rate class and base rate area. The SSIR rate shall be equal to the Eligible SSIR Costs, plus or minus the SSIR True-Up Amount plus or minus the Over/Under Recovery Balance, allocated by rate class, divided by projected annual therms for the rate class and rate areas, as follow:

$$SSIR = (((A \pm B \pm C) \times D) / E)$$

Where:

- A = Eligible SSIR Costs
- B = SSIR True-Up Amount
- C = Over/Under Recovery Balance
- D = Margin Revenue Allocation Percentage by Rate Class
- E = Projected Annual Gas Usage in Therms by Rate Class

SSIR rates will be calculated by first taking the SSIR Adjustment (Sum of A ± B ± C) then allocating the SSIR Adjustment to each rate class based on the Company’s most recent rate review margin revenue allocation. The margin revenue allocation is then divided by projected annual gas usage by class to develop the SSIR rate as a volumetric rate. Annual SSIR revenues shall not exceed 2.5 percent per year in Base Rate Area 2 and 1.5 percent per year in Base Rate Area 3.

**SSIR ADJUSTMENT WITH CHANGES IN BASE RATES**

Whenever the Company implements changes in base rates as a result of a final Commission order in a general rate review proceeding setting new rates based on approved revenue requirements, the Company shall simultaneously adjust the SSIR to remove all costs that have been included in base rates.

**SSIR RATES**
